Verifier-guided RL, 2 x H100: learning rate, loss and sampling statistics (every 10 steps; dark line = mean of the last 10 log lines)

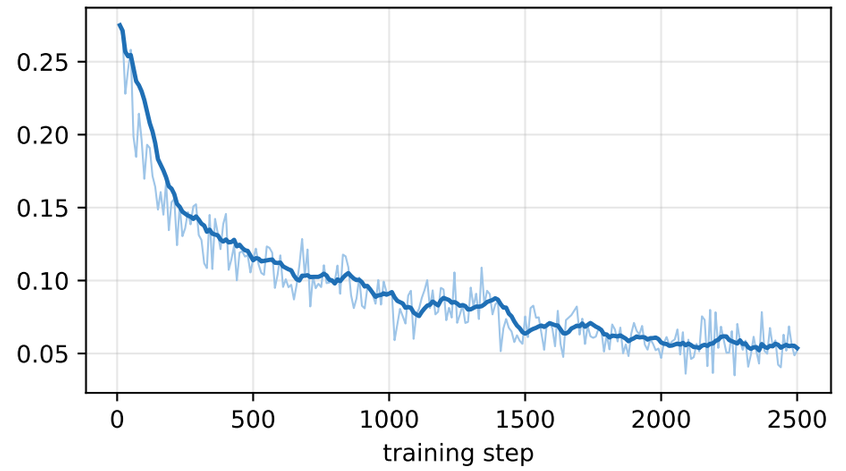

Learning rate (per logged step)

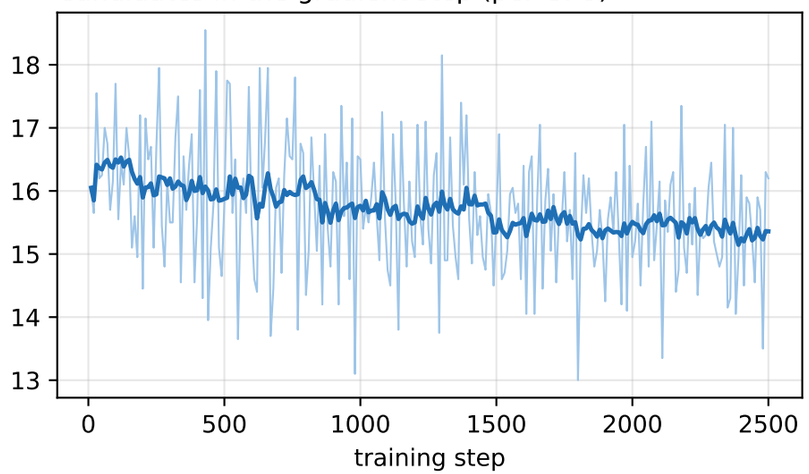

Policy-gradient loss

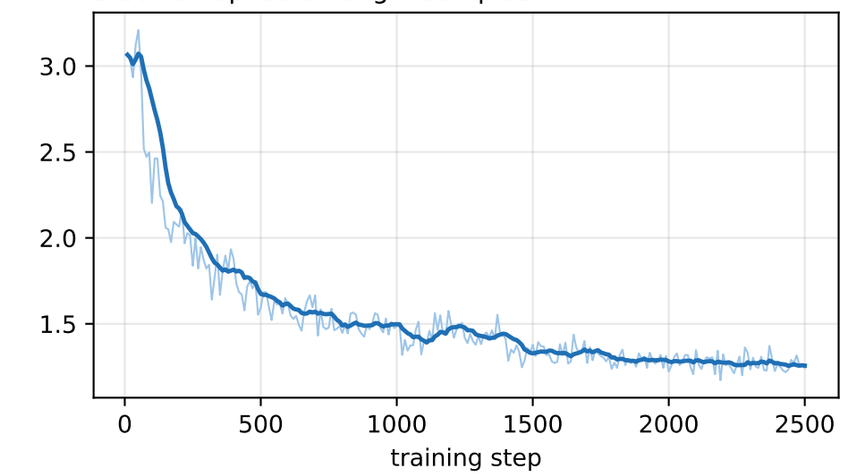

Mean |advantage| of trained candidates

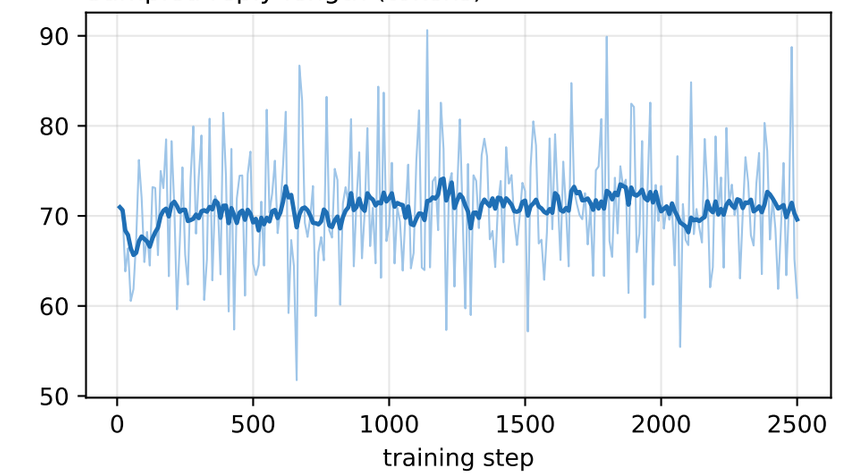

Candidates in the gradient step (per GPU)

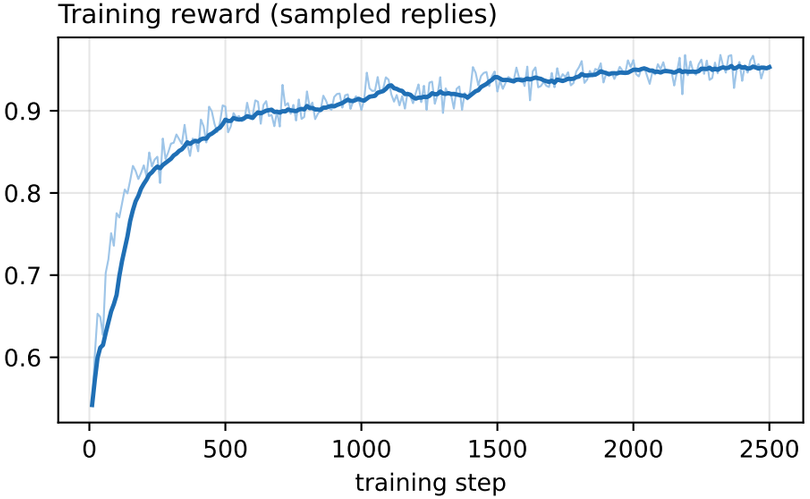

Distinct replies among 4 samples

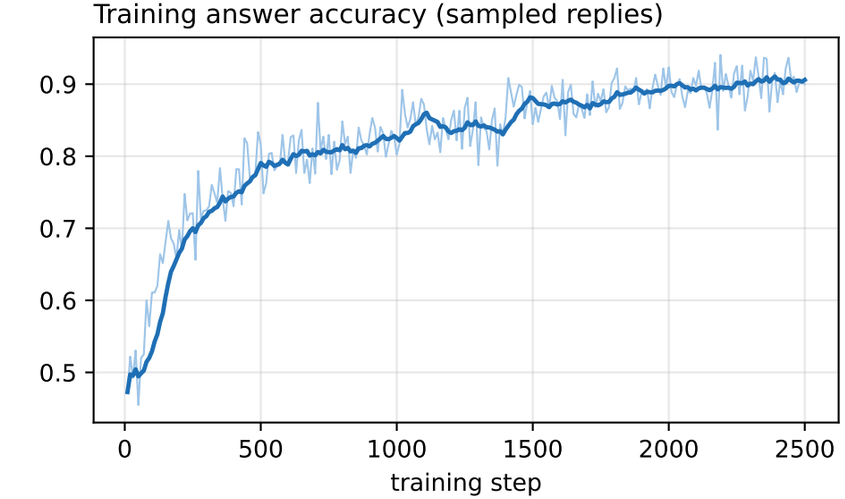

Sampled reply length (tokens)

Training reward (sampled replies)

Training answer accuracy (sampled replies)

Prompts with a learning signal
